Parkme

An app for locating and booking parking spots.

The Problem:
Car parking is a major problem in urban areas in both developed and developing countries. Following the rapid incense of car ownership, many cities are suffering from lacking of car parking areas with imbalance between parking supply and demand which can be considered the initial reason for metropolis parking problems.

The Goal:
Design an app for car owners and drivers for locating and booking car parking spots. It should be easy for user to findout the safe and nearby parking spots.

Research Insight:
Why we need such kind of platform where we can locate and book parking spots. I tried to findout below question and answers to understand this problem in a better way.

What are the parking problems in India?
1. Limited parking spaces: The number of parking spaces available is often insufficient to meet the demand, especially in densely populated areas.
2. Congested streets: Narrow and congested streets can make it difficult to find parking spots and maneuver vehicles.
3. Time-consuming search: Drivers may spend a lot of time searching for parking, which can lead to frustration and contribute to traffic congestion.

Why parking is a big problem?
1. Urbanization: As cities grow, the number of vehicles on the road increases, leading to a higher demand for parking spaces.
2. Limited space: In many urban areas, space is limited, making it difficult to build new parking infrastructure.
3. Congestion: Parking congestion can lead to traffic jams, air pollution, and frustrated drivers.

Why we are facing this problem nowadays?
1. Urban growth: Cities are growing faster than parking infrastructure can keep up.
2. Car dependency: Many cities are designed around cars, leading to a high reliance on driving.
3. Limited planning: Insufficient planning and management of parking resources.
4. Population density: High population density can lead to a higher demand for parking.

Why we are building an app for this?
1. Streamline parking search: Help drivers quickly find available parking spots, reducing congestion and frustration.
2. Optimize parking usage: Encourage efficient use of existing parking infrastructure, reducing the need for new construction.
3. Provide real-time information: Offer updates on parking availability, pricing, and time limits.

Planning:

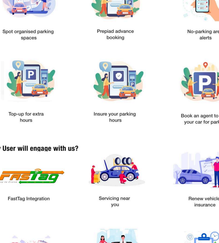
Tie-up with the Corporation and integrate all their parking on our platform Onboarding all other Vendors/Agents

Use sensors in the parking slot to help spot a bay

Image recognition technology for detecting number plate in the pre booking scenario

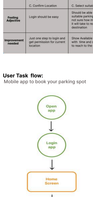
Install CCTV for security reason

Approach and Solution:
Address all the pain point of target user



Why User will engage with us?

Persona:



User journey Map:
Goal: Should be able to find parking easily and book quickly

Action	Get App	Search Parking	View Details	Payments	Confirmation
Task list	Tasks A. Download App B. Login C. Confirm Location	Tasks A. Select date and time B. Search Parking C. Select suitable Parking	Tasks A. Check details B. Confirm Amount C. Initiate checkout	Tasks A. Select payment mode B. Make payment	Tasks A. Get confirmation B. Navigate parking spot or go to home page
Feeling Adjective	Login should be easy	Should be able to find suitable parking quickly. Should be easy to book. It will take to much decisions	More details about space and reviews builds trust	Multiple and easy payment modes	Should be able to navigate spot
Improvement Opportunity	Just one step to login and one step process to current location	Show available parking list with a map view. Provide an option to radio to the destination	Flexibility to change the time slot. Show user reviews.	Easy payment modes	Introduce other services

User Task flow:
Mobile app to book your parking spot

Revenue Model:

- **Park & Pay** (Front end payment)
- **Value Added Services** (Insuring Parking, Insure, Service Etc.)
- **In App And On Location Ads**

Thankyou
